

Introduction to Technical Rescue (3309)

The South Carolina Fire Academy's online learning community is pleased to announce the release of the newest online course, *Introduction to Technical Rescue (3309)* as part of our ongoing Open Enrollment class offerings. This 1 ½ hour class was developed to introduce the emergency responder to technical rescue, its individual disciplines, as well as providing general information on technical rescue size-up, scene management, helicopter operations and victim management. This information is the foundation of all technical rescue responses so we wanted it available to all members of the fire service.

Beginning in February, *Introduction to Technical Rescue (3309)* will be the prerequisite for *Technical Rescuer (3310)*.
